Yuba Community College District

YC - Radiologic Technology Program Recommendations

YC - Radiologic Technology Program Recommendations

Program Description: The Program takes two years to complete both the didactic and clinical portions. The Program meets the required accreditation requirements for the State of California Radiation Health Branch and the JRCERT. The curriculum is designed to meet the recommended prepreqs and subject matter presented by the ASRT. Upon completion of the program, students are eligible to take the ARRT Registry Exam.

Year of Review: 2010-2011

Type of Review: Annual Update

Executive Summary: There have been no major changes since the last Program Review. We continue to have problems with distance education equipment. Second year students (started Aug 2009) 48 started and 44 completed the program. First year students (started Aug 2010) 45 started and 41 are expected to graduate Spring 2012

Future Goals and Program Direction: We hope to consolidate the Sacramento students with the Marysville students. At one time we were projected to be relocated o the new building. There was a change and the plan was to move to the 1700 building (after renovation) Fall of 2011. This did not happen. Any relocation is currently in flux.

Recommendation: Consolidation of Sacramento and Marysville Cohorts

For the past few years we have had two classrooms, the recommendation is to consolidate them into one site. Prefer Marysville but other considerations can be reviewed

Year(s) Requested: 2011-2012

Request Date: 01/21/2012

Recommendation Priority: 3. High Priority

Supporting Evidence: Accreditation exit survey by JRCERT site visitors. They determined we have developed into two different programs and this is not acceptable. Examples, student equal access to classrooms and clinical setting, non-secure testing, etc.

Plans of Action

Plan of Action	Budgetary Impact	Timeline/Responsible Party	Active
While this is not truly a curricular issue, the teaching and satisfaction of the SLO's are compromised. We will continue to work with the staff of the consortium to express the reasons for this request. We also need support from Yuba Administration to understand the compromise that has been made and how the consolidation will improve the program. **Type:** Curriculum/SLO	None - But we will need a larger classroom. One has been identified and there is one scheduled to be renovated for Fall 2013.	Next scheduled meeting with the consortium is Feb 2, 2012	Yes

Recommendation: Curriculum Review

The Program curriculum was revised in 1998. Since that time we have revised courses as necessary to maintain currency and added courses to enhance student learning. In 2010-2011 Radiation Health Branch has removed didactic hours and moved to a competency based format. With this major change in mind, we need to review and revise our courses to be consistent with the changes in industry.

Year(s) Requested: 2010-2011

Request Date: 03/30/2012

Recommendation Priority: 3. High Priority

Supporting Evidence: There is no supportive evidence, while the students are doing well this does not mean we can't improve.

Plans of Action

Plan of Action	Budgetary Impact	Timeline/Responsible Party	Active
The three faculty need to review the current ASRT recommended curriculum and the new ARRT Registry exam requirements. These two will guide the revisions. **Type:** Curriculum/SLO	None		Yes
